

Emissions Trading System

The EU Emissions Trading System (EU ETS) is a cornerstone of the European Union's policy to combat climate change and its key tool for reducing industrial greenhouse gas emissions cost-effectively. Being the first and biggest international scheme for the trading of greenhouse gas emission allowances, the EU ETS covers some 11,000 power stations and industrial plants in 30 countries.

The EU ETS started on 1 January 2005 and covered only energy-intensive industrial installations, which are collectively responsible for nearly half of total EU CO₂ emissions. Following the EU legislation adopted in 2009, aircraft operators will also be covered from 2012.

The new Union Registry system has been built to replace existing national registries that have been operational since 2005. The Registry System ensures the accurate accounting of all allowances issued under the EU ETS and keeps track of the ownership of allowances in the same way as a banking system keeps track of the ownership of money.

Emissions Trading Registry System

Quick Start Guide

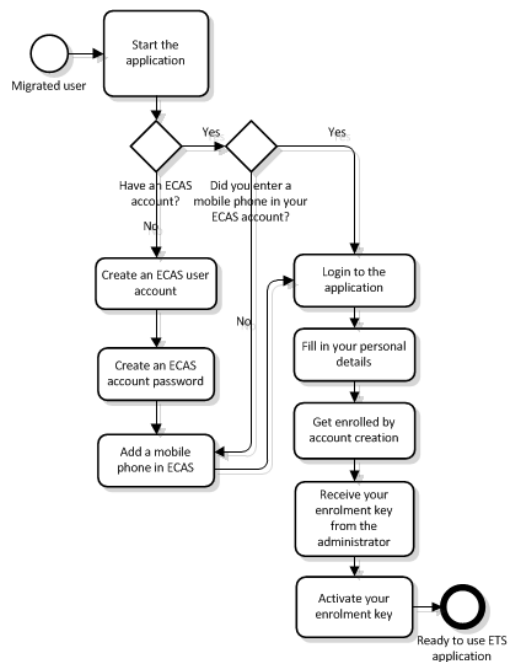

I'm a migrated user

You just need to be recognized by the application

I'm a new user

You need to be recognized by the application and to get a role. Your account must be created.

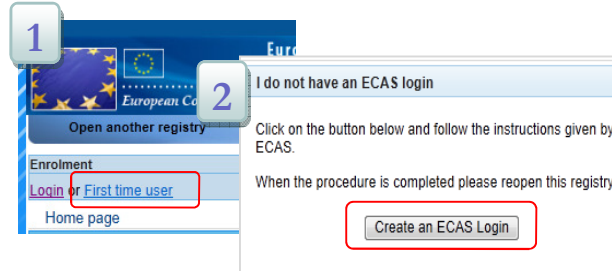

Go to the website

www.en.emissionshandelsregister.at

Start the application

Create an ECAS account

Add a mobile phone in ECAS

Fill in personal details

Activate enrolment key

Create an account
